With App Engine, you only pay for the resources that you use beyond the free quotas. After you exceed the free quotas, your costs will scale with the amount of traffic your application receives. To limit the costs of your App Engine app, you can use any of the following mechanisms: Specify the maximum number of instances; Create budget alerts

Managing App Engine costs | App Engine Documentation ...

Plus, App Engine automatically scales to support sudden traffic spikes without provisioning, patching, or monitoring. Below is a sample reference architecture for building a simple web app using App Engine and Google Cloud.

App Engine Application Platform | Google Cloud

Pricing is different for apps in the standard environment and the flexible environment. Apps in both environments may also incur charges from other Google Cloud products, depending on which products they use in addition to App Engine. Standard environment pricing. Apps in the standard environment have a free quota for App Engine resources.

Warmup requests are used by the App Engine scheduler, which controls the auto scaling of instances based on user-supplied configuration. With warmup requests enabled, App Engine issues GET requests to `/_ah/warmup`. You can implement handlers for this request to perform application-specific tasks, such as pre-caching application data.

Configuring Warmup Requests to Improve Performance

In simple words, SRS document is a manual of a project provided it is prepared before you kick-start a project/application. This document is also known by the names SRS report, software document. A software document is primarily prepared for a project, software or any kind of application. There are a set of guidelines to be followed while preparing the software requirement specification document.
